

# Lisle Senior High School

## Philosophy

It is the philosophy of Lisle Senior High School that each student be given the opportunity to work toward his or her full potential. We will strive to provide each student, within our physical, financial, and time limits, an education program that will best suit his or her individual needs, and an environment conducive to positive self-concept and growth in inter-personal relationships. We believe in exposing each student to the diversity of cultures and values of our total society, and helping each student adapt to the ever-changing nature of local, national, and international communities. Learning is the central focus of all our endeavors as we work toward the physical, intellectual, emotional, aesthetic, and social growth of each student.

## Objectives

The following general objectives are derived from the school philosophy and will serve as the foundation for all our endeavors:

- Education Program - To help each student to develop his or her full potential by providing a well-rounded curricular and extra-curricular activity program featuring individualization of instruction whenever possible.
- Interpersonal Relationship - To provide each student with opportunities that offer development and enrichment to promote personal, social, and academic growth, so that he or she can contribute to our ever-changing and complex society.
- Positive Self-Concept - To create an environment in which each student can experience success by promoting self-discipline and student responsibility for his or her actions, and fostering mutual respect and tolerance of all members of the learning community.
- Learning Environment - To provide each student opportunities to develop, compete, and succeed academically and socially to meet the demands of an expanding global society.
- Learning as the Central Focus - To assist and encourage each student to participate in activities that will enhance understanding of his or her responsibilities of society.
- Individual's Full Potential - To provide programs that encourage independent thought, critical and creative thinking, and intellectual curiosity, as well as focus on learning as a life-long process.
